## 1. Description and objectives of the program

The Master of Science program in *Cellular and Molecular Neuroscience* is an international, research-oriented two-year program offered by the Graduate Training Centre of Neuroscience. We invite students with a first academic degree (BSc) in biology, molecular biology, molecular medicine, biochemistry, genetics, biotechnology, or medical sciences or in another relevant field of natural or engineering sciences. The theoretical training focuses on neural diseases, neurogenomics and proteomics, neurophysiology, and systems neuroscience. The practical training covers state-of-the-art methods of neuroscience research offered by our internationally renowned partner institutes.

The Graduate Training Centre of Neuroscience creates an interdisciplinary environment through its three Master of Science programs with complementary focus and curricula: *Neural and Behavioural Sciences*, *Cellular and Molecular Neuroscience*, and *Computational Neuroscience*. The curricula in all three programs are synchronized and comprise large elective modules. We encourage our students to cross borders during their theoretical training in their first year. Depending on their individual skills, interests, and motivation the students are welcome in labs beyond their specific master's program for their practical research activities in the second year.

- Our graduates have a sound standing in basic and clinically oriented neuroscience, extending from the genetic, molecular, cellular, and physiological biology of neurons and glial cells to the genetic and molecular basis of neural diseases.
- Our graduates have profound skills in mathematics, statistics, and programming, allowing them to measure, analyse, and visualize data and results.
- Our graduates have solid theoretical and hands-on expertise in a wide range of state-of-the-art neuroscientific methods, including histological, molecular biological, stem cell, cellular and molecular imaging, and neurophysiological recordings.
- Our graduates scrutinize and evaluate the suitability of experimental approaches, allowing them to choose the most appropriate methods for a given problem. They combine techniques in a meaningful way to attack complex scientific problems.
- Our graduates communicate their findings competently and convincingly in oral and written form. They communicate and discuss with experts in the field and contribute to discussions on current neuroscience topics.
- Our graduates acquired general competencies such as time and conflict management, coping with stressful situations, as well as social skills.
- Our graduates gained cross-cultural competencies allowing them to succeed and thrive in international teams.

After successful graduation, our students are prepared for a career in research and development in internationally competitive institutes and companies. Beyond research and development, our graduates excel in the acquisition of new knowledge, project management, and problem-solving.

## 2. Curriculum

### 2.1 Module Overview

(according to the module overview of the study and examination regulations)

| Module Code | Compulsory Elective | Module title                             | Semester         | CP        |
|-------------|---------------------|--|------------------|-----------|
| <b>CM01</b> | <b>c</b>            | <b>Neuroanatomy and Neurophysiology</b>  | <b>1</b>         | <b>6</b>  |
| <b>CM02</b> | <b>c</b>            | <b>Neural Diseases and Neurogenetics</b> | <b>1 &amp; 2</b> | <b>9</b>  |
| <b>CM03</b> | <b>c</b>            | <b>Molecular Neurobiology</b>            | <b>1 &amp; 2</b> | <b>9</b>  |
| <b>CM04</b> | <b>c</b>            | <b>Sensory Systems</b>                   | <b>1 &amp; 2</b> | <b>6</b>  |
| <b>CM05</b> | <b>c</b>            | <b>Data Analysis</b>                     | <b>1 &amp; 2</b> | <b>6</b>  |
| <b>CM06</b> | <b>c</b>            | <b>Advanced Methods</b>                  | <b>1 &amp; 2</b> | <b>9</b>  |
| <b>CM07</b> | <b>c</b>            | <b>Advanced Neuroscience</b>             | <b>1 &amp; 2</b> | <b>9</b>  |
| <b>CM08</b> | <b>c</b>            | <b>Electives</b>                         | <b>1 &amp; 2</b> | <b>6</b>  |
| <b>CM09</b> | <b>c</b>            | <b>Current Research and RCR</b>          | <b>1 - 3</b>     | <b>3</b>  |
| <b>CM10</b> | <b>c</b>            | <b>Laboratory Rotations</b>              | <b>3</b>         | <b>27</b> |
| <b>CM11</b> | <b>c</b>            | <b>Master's thesis</b>                   | <b>4</b>         | <b>30</b> |

*c = compulsory, ce = compulsory elective, e = elective*

Semesters 1 and 2 comprise theoretical courses with a total workload equivalent to 61 CPs. A core curriculum of compulsory courses (c) accounts for 37 CPs (CM01 – CM05, CM09).

In the compulsory elective (ce) modules CM06 and CM07 the students complete 1-3 courses, which sum up to 9 CPs. In contrast to the compulsory modules, the students can choose from multiple courses that all address the respective module's title and general description. The individual module descriptions for CM06 and CM07 in chapter 3.2 comprise an exclusive list of available courses for the current academic year.

The elective module CM08 allows the students to choose courses from any master's program at the University of Tübingen except for sports courses. While all other modules contribute to the final grade, the elective module CM08 does not. The students are invited to explore the field of cellular and molecular neuroscience and other disciplines.

In the program's 2<sup>nd</sup> year the students join labs of their choice for two lab rotations and, finally, their master's thesis.

## 2.2 Module overview by suggested time course

The coursework is completed in the semesters 1 and 2 with the only exception of a block course in module CM09.

The compulsory module *CM05 – Data Analysis* offers a choice between courses depending on the individual student's skills and interests. It consists of one statistical course and one programming or mathematics course. The students choose between basic and advanced courses. Depending on the student's choice of courses for *CM05 – Data Analysis*, these courses will be completed in the 1<sup>st</sup> or the 2<sup>nd</sup> semester. Please see the following chapter 2.3 overview by study progress and the individual module description in chapter 3.1 for more details.

For the compulsory elective and elective modules CM06 – CM08 the workload per semester is determined by the individual students' choice of available courses. A workload of 36 CPs per semester should not be exceeded.

**It is strongly recommended to complete all coursework requirements before the commencement of the 1<sup>st</sup> lab rotation. At least 50 of 60 CPs from CM01 – CM08 must be completed.** Depending on the lab and the project to be completed during a rotation, additional coursework during lab rotations represents an additional burden that must not be taken lightly and needs to be agreed on with the respective supervisor.

**Modules CM01 – CM10 must be completed before admission to the master's thesis.**

| Study area               | Nr.  | Module   | Semester |      |    |    | Σ   |
|--------------------------|------|--|----------|------|----|----|-----|
|                          |      |  | 1        | 2    | 3  | 4  | CP  |

## 2.3 Overview by study progress and credit requirements

| The allocation of CPs to courses is for information only. Credits are only awarded upon completion of the module.<br><br>Abbreviations are explained below in chapter 3 (Module descriptions). |  | Assessment |              |                      |                       | Course              |        |                | Total CP | Semester  |     |    |    |    |
|--|--|------------|--------------|----------------------|-----------------------|---------------------|--------|----------------|----------|---|-----|----|----|----|
|  |  | Grading    | Type of exam | Duration of the exam | Weight for the module | Contact hours (SWS) | Status | Type of course |          | The allocation of exams to semesters is only a recommendation. Compulsory allocations are marked as such. |     |    |    |    |
|  |  |            |              |                      |                       |                     |        |                |          | 1.  | 2.  | 3. | 4. |    |

## 2.4 Suggested timeline for individual courses

| 1. Semester // Winter Semester  |     | Credits       |
|---|-----|---------------|
| Functional Organization of Vertebrate CNS<br>( <i>block, 1<sup>st</sup> week lecture period</i> ) | 3   |               |
| Neurophysiology   | 3   |               |
| Genetic and Molecular Basis of Neural Diseases I  | 3   |               |
| Human Neurogenetics   | 3   |               |
| Molecular and Cellular Biology of Neurons and Glia  | 3   |               |
| Neurochemistry and Neurotransmitters  | 3   |               |
| Sensory Systems 1   | 3   |               |
| Essential Statistics  | 3   |               |
| Advanced Methods – Course I   | 3   |               |
| Advanced Neuroscience – Course I  | 3   |               |
| NeuroColloquium   | 0,5 | <b>Σ 30,5</b> |
| 2. Semester // Summer Term  |     | Credits       |
| Genetic and Molecular Basis of Neural Diseases II   | 3   |               |
| Neurohistology and Quantitative Neuromorphology   | 3   |               |
| Sensory Systems 2   | 3   |               |
| Basic Programming   | 3   |               |
| Advanced Methods – Course II  | 3   |               |
| Advanced Methods – Course III   | 3   |               |
| Advanced Neuroscience – Course II   | 3   |               |
| Advanced Neuroscience – Course III  | 3   |               |
| Individual Perspectives – Course I  | 3   |               |
| Individual Perspectives – Course II   | 3   |               |
| NeuroColloquium   | 0,5 | <b>Σ 30,5</b> |
| 3. Semester // Winter Semester  |     | Credits       |
| Scholarly conduct of research ( <i>1-week block, before rotations</i> )                           | 2   |               |
| Essay / Laboratory Rotations  | 27  | <b>Σ 29</b>   |
| 4. Semester // Summer Term  |     | Credits       |
| Master Thesis   | 30  | <b>Σ 30</b>   |
|   |     | <b>Σ 120</b>  |

### 3. Module descriptions

The following module descriptions provide an overview of the *Cellular and Molecular Neuroscience* master's program for the current academic year. Please note that the content elements of individual modules and the lecturers might be subject to changes between academic years. The following abbreviations are used in the following module descriptions and in the previous overview of the study progress.

| Key                 |  |
|---------------------|--|
| Grading:            | g = graded; ng = not graded (pass/fail); ne = no examination   |
| Type of exam:       | w = written exam; pj = project; lr = lab report, pr = presentation, th = thesis, h = homework, e = exercise                              |
| Duration:           | Duration of the examination in minutes.  |
| Weight:             | Courses: Weighting of the examination grade towards the module grade.<br>Modules: Weighting of the module grade towards the final grade. |
| Credit hours (SWS): | Hours spent in the classroom per week during the semester.   |
| Status:             | c = compulsory; e = elective   |
| Type of course:     | L = lecture; S = seminar; E = exercise, T = tutorial, P = practical work   |
| CP:                 | credit points (ECTS)   |

### 3.1. Foundations

| <b>Frequency</b>   | once a year, during the winter semester   |                |        |                                |                                      |              |                      |         |                   |
| <b>Language of instruction</b>   | English   |                |        |                                |                                      |              |                      |         |                   |
| <b>Teaching methods</b>  | Lectures with practical work and tutorials.   |                |        |                                |                                      |              |                      |         |                   |
| <b>Content</b>   | This module teaches the fundamental anatomy and physiology of the mammalian CNS with an emphasis on the human brain.  |                |        |                                |                                      |              |                      |         |                   |
| <b>Qualification goals</b>   | Students understand and can explain basic principles of the functional and anatomical organization of the nervous system. Students understand the electrical signal generation, signal processing and integration in neurons, the transmission of the neuronal signal at the chemical synapse, as well as the underlying molecular building blocks. They understand the basics of the techniques used to study neuronal processing at the single cell and small neuronal network level. |                |        |                                |                                      |              |                      |         |                   |

| <b>Content</b>   | This module covers the molecular basis and pathophysiology as well as the preclinical and clinical therapeutic targets of major neural diseases. It provides the basic principles of inheritance, molecular genetics and genomics, with special reference to neural traits and disease.  |                |        |                                      |    |              |                      |         |                   |
| <b>Qualification goals</b>   | The students understand the molecular and cellular pathogenesis of major neural diseases. The students can explain the molecular and pathological commonalities of the diseases and can distinguish between neurodegeneration and neural dysfunction. Based on the molecular and cellular pathomechanisms for each disease the students can derive and justify potential future therapeutic targets. |                |        |                                      |    |              |                      |         |                   |

| <b>Content</b>   | This module provides advanced knowledge of the molecular and cellular biology of neurons and glia: cell structure, cell-cell interaction and communication, signalling, and neurochemistry of neurotransmitters. A block course with practical elements introduces histological techniques, immuno-histochemistry, and in situ hybridization to prepare brain tissue for light, fluorescence and electron microscopy. |                |        |                                |                                      |              |                      |         |                   |
| <b>Qualification goals</b>   | The students understand nervous system function and dysfunction at the molecular level. The students will have profound theoretical knowledge and basic practical skills in neurohistological and microscopical techniques  |                |        |                                |                                      |              |                      |         |                   |

| <b>Teaching methods</b>  | Lectures with tutorials.   |                |        |                                |                                      |              |                      |         |                   |
| <b>Content</b>   | The module covers the functional and anatomical organisation of the main sensory systems of the mammalian brain, focusing on humans. Principles of neural coding and information processing will be emphasized. Based on the knowledge of the intact system, causes and consequences of disease are introduced.                        |                |        |                                |                                      |              |                      |         |                   |
| <b>Qualification goals</b>   | The students understand the function of sensory receptor cells, receptor proteins, and signal transduction cascades. The students can differentiate common and specific features of the processing and coding of sensory information. The students know and understand dysfunctions and diseases of sensory systems in human patients. |                |        |                                |                                      |              |                      |         |                   |

| <b>Teaching methods</b>  | Lectures with exercises and tutorials. Seminar with practical work.  |                              |                       |               |                                |                                      |                     |                      |                |                          |
| <b>Content</b>   | The module comprises courses that cover statistics, mathematics, and programming skills for neuroscience.  |                              |                       |               |                                |                                      |                     |                      |                |                          |
| <b>Qualification goals</b>   | The statistics course provides students with an understanding of and practical skills for basic or advanced statistical data analysis. The students apply statistical approaches to their own data and evaluate analyses in publications. The course on basic programming provides students with programming skills for data analysis and visualization. The students formalize neuroscientific concepts mathematically and understand the mathematical concepts, which are required for reading journal papers in neurophysiology and systems neuroscience. |                              |                       |               |                                |                                      |                     |                      |                |                          |

| <b>Applicability and Transfer</b>  | Compulsory module MSc Cellular and Molecular Neuroscience and MSc Neural and Behavioural Sciences. Courses not chosen here can be used for module <i>CM06 Advanced Methods</i> .   |                              |                       |               |                                |                                      |                     |                      |                |                          |
| <b>Participation requirements</b>  | Basic mathematical and statistical skills are required.  |                              |                       |               |                                |                                      |                     |                      |                |                          |

### 3.2. Advanced Specialisations

The compulsory elective study area *Advanced Specialisations* offers the students a choice of courses that build on knowledge and skills acquired in the compulsory study area *Foundations* and during their individual first-degree studies. The study area consists of two modules with 9 CPs each, one module comprising methods and applications, and another module focusing on specific topics in neuroscience. A list of available courses for these modules is curated by the study commission before each semester. Criteria for the selection of courses in these modules are the fit to the course program and the general theme of the respective module, the quality and reliability of the courses, and the range of interests among the students in the program. Available courses for each semester are published in the updated module handbook and in the university's course catalogue.

| <b>Content</b>   | <p>Students can choose from a closed list of methods courses beyond the study area <i>Foundations</i>. These courses introduce methods and techniques for data acquisition, e.g. microscopy and cell imaging, data analysis and interpretation, e.g. advanced statistics and machine learning, or applications, e.g. therapeutic approaches. Students choose courses with a total workload of 9 CP irrespective of the number of courses, e.g. 1 course of 9 CP or 3 courses of 3 CP each. At least 3 CP must be graded and will be included in the cumulative, final grade. Students can choose courses from the module CM05, which they have not completed for this module (e.g. "Essential Statistics" for CM05 and "Advanced Statistics" for CM06). The list of available courses is curated by the study commission. Students can choose from:</p> <p><b>Winter term 2023/24:</b></p> <ul style="list-style-type: none"> <li>• Courses from module CM05 Data analysis (please see above).</li> <li>• <a href="#">Machine Learning + Exercises (Berens; 6 CP; graded)</a></li> <li>• <a href="#">Methods in Molecular Neurobiology (Himmelbach; 3 CP; graded)</a></li> </ul> |                                |   |

| <b>Teaching methods</b>                            | Depends on chosen course: lecture, seminar, exercise, tutorial, practical work.  |                                |   |
| <b>Content</b>                                     | <p>Students can choose from a closed list of courses on topics beyond the study area <i>Foundations</i>. These courses extend topics, which have been introduced in the study area <i>Foundations</i>, e.g. Neuroglia and Current Topics in CMN, or add new topics, not yet covered, e.g. Learning and Memory and Social and Affective Disorders. Students choose courses with a total workload of 9 CP irrespective of the number of courses, e.g. 1 course of 9 CP or 3 courses of 3 CP each. At least 3 CP must be graded and will be included in the cumulative, final grade. The list of available courses is curated by the study commission. Students can choose from:</p> <p><b>Winter term 2023/24:</b></p> <ul style="list-style-type: none"> <li>• <a href="#">Birdsong as a Model (Veit; 3 CP; WiSe; graded)</a></li> <li>• <a href="#">Regulation of Eating Behaviour (Giel; 3 CP; not graded)</a></li> <li>• <a href="#">Current Topics in Sleep &amp; Circadian Health (Spitschan; 3 CP; not graded)</a></li> <li>• <a href="#">Motor Systems (Schwarz; 3 CP; not graded)</a></li> </ul> <p><b>Summer term 2024:</b></p> <ul style="list-style-type: none"> <li>• <a href="#">Molecules to Circuits - The Retina as a Model System (Euler; 3 CP; graded)</a></li> <li>• <a href="#">Social and Affective Disorders in Psychiatry (Derntl; 3 CP; graded)</a></li> <li>• <a href="#">Stem Cells &amp; Regeneration (Hauser&amp;Liebau; 3 CP; graded)</a></li> <li>• <a href="#">Sleep: Phenomena, Physiology and Function (Gais; 3 CP; graded)</a></li> <li>• <a href="#">Neuroglia (Kronenberg-Versteeg und Pfeiffer; 3 CP; graded)</a></li> <li>• <a href="#">How does vision work? ### 3.3. Individual Perspectives

The study area *Individual Perspectives* gives students the opportunity to learn about related fields of research, development, and applications (e.g., immunology, big data analysis), improve their language skills in German (for foreign students) or English (for German students), or reflect upon ethical or philosophical aspects and challenges in neuroscience.

| <b>Language of instruction</b>   | English   |                                |                                    |
| <b>Teaching methods</b>  | Depends on chosen courses: lecture, seminar, exercise, tutorial, practical work.  |                                |                                    |
| <b>Content</b>   | In the study area <i>Individual Perspectives</i> students can choose courses from all courses, except for sports courses, offered for students in master's programs at the University of Tübingen. This includes particularly the University's <a href="#">Transdisciplinary Course Program</a> . The students can also choose additional courses from the module CM05 Data Analysis and the study area <i>Advanced Specialisations</i> (please see above). |                                |                                    |
| <b>Qualification goals</b>   | The students build on and extend their individual knowledge and interests. They develop and broaden transdisciplinary competencies. They extend their theoretical expertise in topic areas of their choice.   |                                |                                    |
| <b>Requirements for Obtaining Credit, Grading, weight if applicable:</b> | Depends on the student's choice. <b>Courses taken in this area are included in the transcript of records, but the grades will not be considered for the cumulative grade of the master's program.</b>   |                                |                                    |
| <b>Applicability and Transfer</b>  | Elective module MSc Cellular and Molecular Neuroscience.  |                                |                                    |
| <b>Participation requirements</b>  | Depends on the student's choice.  |                                |                                    |

### 3.4. Research Practise

The study area *Research Practise* comprises three modules. It offers students an overview of frontiers topics in neuroscience across the three master's programs of the Graduate Training Centre of Neuroscience. It lays the foundations for the scholarly, good conduct of research and offers each student active participation in current research projects during two laboratory rotations of their choice. The study area comprises the master's thesis, which concludes the master's program in *Cellular and Molecular Neuroscience* with a 6 months research project.

| <b>Duration</b>                                    | 3 Semester   |                                |                                      |
| <b>Frequency</b>                                   | once a year, during the summer or winter semester  |                                |                                      |
| <b>Language of instruction</b>                     | English  |                                |                                      |
| <b>Teaching methods</b>                            | Lecture, Seminar with exercises and practical work.  |                                |                                      |
| <b>Content</b>                                     | <p>This module introduces the students not only to current research in the field of neuroscience but also initiates and fosters discussions among students and with guests and lecturers about a broad range of topics. The NeuroColloquium is a lecture series organized by the Tübingen Neuroscience Campus. It presents internationally renowned researchers from various fields of neuroscience. The speakers provide an overview of state-of-the-art neuroscience topics, from genes to behaviour and new methodologies. Every semester, students from the three master's programs at the GTC choose a speaker of their interest.</p> <p>The seminar on scholarly conduct of research offers the opportunity to learn about, discuss and practice scholarly writing and good scientific conduct. The seminar is offered as a block course immediately before the first laboratory rotation.</p> |                                |                                      |
| <b>Qualification goals</b>                         | <p>The NeuroColloquium introduces students to a wide range of neuroscience research and invites them to look beyond their own noses and think outside the box of their immediate interests and studies. The students learn to participate in and contribute to discussions with speakers and the audience. In the seminar on scholarly conduct of research, the students understand and acquire current standards of research practise and communication.</p>  |                                |                                      |

| <b>Teaching methods</b>  | Supervised practical work and seminar.   |                |                         |                     |                                      |                      |                        |         |                   |
| <b>Content</b>   | <p>Students perform two laboratory rotations working on small research projects in laboratories of their choice. In general, the assigned study is in line with currently ongoing research in the respective laboratory. The lab projects are concluded with a written report and an oral presentation during a seminar at the end of each rotation period. Each student presents the project and results to all fellow students from the master's programs at the GTC Neuroscience and answers questions from fellow students and supervisors.</p> <p>Ideally, the students accomplish their two lab rotations in two different research groups with distinct scientific questions and different methods.</p> |                |                         |                     |                                      |                      |                        |         |                   |
| <b>Qualification goals</b>   | <p>The students acquire a wide range of practical skills in state-of-the-art methods. Further skills trained during lab rotations include literature survey, planning of a research project and the design of experiments, documentation of data, evaluation and interpretation of results, compiling data for and writing of a report. The students learn to prepare and give an oral presentation on their research project for a large expert audience.</p>   |                |                         |                     |                                      |                      |                        |         |                   |

| <b>Teaching methods</b>  | Independent, individually supervised research project.  |                |        |                        |                                      |                      |               |         |                   |
| <b>Content</b>   | In-depth study of a problem in neuroscience. Independent implementation of a relevant research project, which includes literature search and review, formulating a research question, planning, data collection, data analysis, and evaluation of the findings in the context of current research. The research project is reported in the master's thesis and in an oral presentation in a colloquium of the host workgroup, department, or institute. |                |        |                        |                                      |                      |               |         |                   |
| <b>Qualification goals</b>   | The students familiarize themselves independently with a complex, new subject area and develop new, relevant questions in this subject area. They can investigate new questions using appropriate methods, i.e. plan and implement a scientifically sound approach. Students can evaluate, prepare, and communicate the resulting findings in writing and orally in the context of the research field.  |                |        |                        |                                      |                      |               |         |                   |
